

Fine Composted Bark

0-8mm bark that can be used as either a single season ornamental mulch or soil conditioner.

Produced from mixed conifer bark with a high percentage of spruce.

Produces fines with 90% of particles in the range of 0 - 8mm.

Contains minimal white wood, normally within 10% (by volume basis).

Moisture content in the range of 55-65% (green weight basis) on delivery.

The weight/volume ratio (bulk density) is normally in the range of 350 - 500Kg/m³

The pH range is between 5.5 and 7.5

Manufactured from materials sourced 100% within the British Isles.

Application Rates

We recommend that all our mulches are laid at a depth of between 50 & 100mm to obtain the best results. Allowing 10% for settlement.

Available in Bulk Loose.
